## **Drop by drop: Understanding the impacts of the UK's water footprint through a case study of Peruvian asparagus**

### **Errata note**

*Please note the following amendments and additions to the original text in this document:*

p.2 Amended sentence:

Special thanks are extended to Dr Eric Rendón of the Universidad San Ignacio de Loyola, Dr David Bayer and the staff of Progressio and CEPES for the kind support and guidance.

p.23 Amended sentences:

There are two surface water Juntas in the valley, La Achirana and Ica River, and two groundwater juntas. La Achirana has 7529 members and irrigates 15,679 hectares, whereas the Ica River Junta has 6553 users and irrigates 14,249 hectares.

Added footnote:

There are inconsistencies in the number of users per Junta reported by different sources. The quoted figures are from the Ministry of Agriculture, <http://www.agroica.gob.pe/atdrica.shtml> (accessed 20 Oct 2010).

p.25 Amended table:

Number of farms / water users, small to medium size farm, should be 7529 (Junta La Achirana) and 6553 (Junta Rio Ica).

p.30 Added quote:

The following annual overdraft of the aquifer estimate should be included in the list: 284 Mm<sup>3</sup> - estimate by Dr David Bayer, Ica.

Added footnote:

Bayer, D (2009) La Crisis del Agua en Ica y Como Resolverla

p.43 Footnote 64, amended to:

In October 2008 the community of Puno temporarily barred a company from installing two 24" pipes across their territory.

p.51 Footnote 70, amended to:

According to the Ministry of Agriculture, La Achirana has 7529 users, Rio Ica has 6553.

p.54 Amended photo credit:

The lower photo is of Huancavelica city centre.

p.56 Amended sentence:

This part of the improvement works will bring another 60 Mm<sup>3</sup>/yr into the Ica Valley, however, this figure is disputed.
